

(a) Task constraints

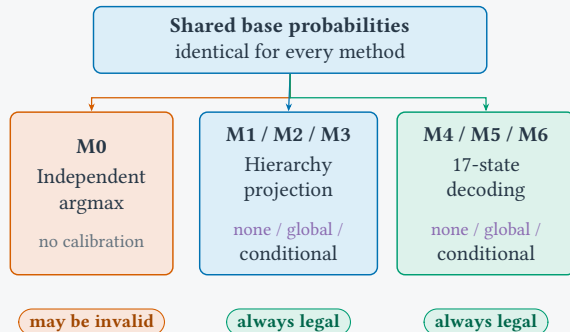

four outputs, one legal path

17 legal tuples out of $2 \times 5 \times 3 \times 4 = 120$ combinations
1 + 4(1 + 3) legal; the other 103 violate the hierarchy

(b) Alternative decision routes

same probabilities and Test rows

Calibration and output rule define alternative methods, not sequential stages.

Controlled comparison: only the decision route changes.
